

BEGINNING COMPOSITION FIGURE SCULPTURE COURSE

BEGINNING COMPOSITION FIGURE SCULPTURE COURSE

Marble Satyr and Hermaphrodite, Greco-Roman Imperial Period 1st century A.D., Villa A Oplontis, Excavation 1977 Pompei, Ercolano e Stabia

**Contact: 301 633 2858, or 443 764 5364 by cell phone call,
or text message, or contact:
sculptorBradP@sculptorBradP.com to arrange a visit, or to**

enroll in a class or open group. Message Board below seems to have issues. Calendar is general information on classes available, days and times vary.

This course consists of 9 four-hour sessions (day time), or three-hour sessions (evening time). The same pose, and intended Life Model, or Figure Sculpture is each time for the duration of the course. There will be one half-hour to one-hour (day), or one half hour (night) review for the class after life model each session, making a total of four hours - (day), or three hours - (night). Additional optional limited workshop time is available without the life model, to work from a demonstration sculpture made during the class. Limited optional workshop time is coordinated as a specific time slot depending on the class, and availability during a particular week. Limited optional workshop time is included in the class price, but the workshop is not required for the class. Rescheduling the limited optional workshop is not possible after the timeslot is coordinated with the students for the semester. Students will focus on bone landmarks and major muscle groups while working to capture the action of the pose and characteristics of the model. Overall forms will be blocked in through observation of shapes, rhythms and interconnecting commensurate planes, leading to a simplified yet integrated sculpture sketch composition.

\$ 1120.00 - (4 hour) - // Day - x - 9

or

\$ 1200.00 - (3 hour) - Eve. - x - 9

[huge_it_gallery id="11"]

The eye takes in information that the mind develops to realize subject and form. We only see what we think we know, and have learned to perceive. Through a series of exercises, students will begin the process of seeing dimensionally within a context of related shapes. Because of this study, students will initiate the necessary skills to construct aesthetic form. Sculpture study will comprise a three-dimensional figure sculpture in plasticine (non-drying clay).

Galerie Antickeho Umeniv Hostinnem - Invitation to the Dance, plaster reconstruction of a Greco-Roman, Hellenistic sculpture group from various European museum collections of Greek sculpture, archaeologist Wilhelm Klein of Karlova University (Charles University) 19th. century reconstruction.

COURSE OBJECTIVES:

To develop perception of **patterned shape**

To develop the ability to take **angles** and **proportions**

To understand **glyptek shape** as it describes form

To develop **turning rythems** to create an effective composition

To develop **visual scale** from life to the sculpture

To understand **commensurate planes**

To learn **basic anatomy**

An armature appropriate to the above-mentioned class constructed prior to the first paid classes, as a free benefit for those that have paid for the 9-week session, is instructed and built in the Parker Studio Atelier. Each student supplies materials for the construction of the Figure Sculpture armature. Two cut to proper size, glued, and tacked together 22 x 22 inch A/C Exterior 3/4 plywood fir boards, (nail tacks should be counter sunk on the head side, and the point ends should not stick through the opposite plywood board surface). Next, the glue now dry between the tacked together plywood boards, the board should have three to five coats of polyurethane painted on all edges, also both front, and back main sides, which should be completely dry to the touch, and feel like the plywood is coated in thick plastic. After the completion of the preparation of the plywood boards, the board is brought to the free armature building class with plumbing pipe supplies, aluminum alloy sculpture wire rolls, flat head machine bolts, etc..., as detailed in the requested supply list. Additionally, Sculpture tools, and Chavant NSP Non-Sulfur, Soft Brown Plasteline are supplied by each student for their sculpture project, also detailed in the requested supply list.

Students of painting and drawing, as well as those of sculpture will benefit from these courses. Through the study of anatomy, running rhythms, natural geometric shape type, shape projection (seeing three-dimensionally from a single point of view), commensurate planes, balance, symmetry and asymmetry, the students will come to better understand the actual shapes of the bust or figure and to perceive the interrelationships which cause the figure or portrait to seem capable of function and movement. The instructor will point out specific shape types in the model and demonstrate how every large shape is reflected in each smaller part of the head or figure. Structural anatomy and the balance of weight and mass will be studied in depth. An understanding of the large masses as a base for smaller details will be strongly emphasized and, subsequently, the bust or figure will seem more natural and clearly ordered. Shadows will be used as a tool to reveal shape instead of hiding it. As a result of the course, students will become

less likely to do work which appears oversimplified, disjointed or appear cartoon-like. Individual styles may be achieved later by choice rather than by mistake.

Students will also have visual access to a unique and extensive collection. There are Anatomical Models, and European Female, Male Skeletons available for reference, some of which were produced in Germany from the earlier 20th century: dissections cast from life into hand painted plaster - a series of four levels of the head / neck - from surface to deeper level structures, and a plaster hand painted anatomical torso; anatomical models of various scale, plasters from N.Y.C. full body in sections of dissection from life, as well as European Antique Sculpture Plaster Casts, and Anatomical scale Figure Plasters.

Parking is free, there is plenty of space available for the model and students to park on the Square, as well as additional parking behind the townhouse in a private parking area.

Mr. Parker is a graduate of the Pennsylvania Academy of the Fine Arts where he studied for six years.

Mr. Parker studied concurrently at the Frudakis Academy of Fine Art at which time he received a National Sculpture Society Merit Scholarship. Later study in Europe in the first half of the 1990s.

Private Sculpture Studio, Drawing & Sculpture Classes, By Appointment - Open Drawing & Sculpture Group Sessions, Commissioned Portrait Bust Sculpture, Fountain Sculpture, Figure Sculpture, & Relief Sculpture Compositions. Private Gallery of exhibited sculpture, by appointment.

Munich

Blundell Collection, Liverpool, England - Satyr Raping Hermaphrodite, Hellenistic, Greco-Roman copy. The base was discovered with the group but does not belong to it. The inscription on the base is modern. The statue was found in the remains of a villa at Prato Bagnato on the Via Prenestina in 1776 by Nicola La Piccola and sold to Blundell in 1786. The statue of Dionysos (59.148.32) was found in the same context as well as the Head of Apollo and the Head of Isis. The base is a restoration and the inscription on the right end is modern. There are several restorations on the left arm and right leg of the hermaphrodite, her left breasts. Restorations to the satyr include the lower right leg from the knee, the lower calf and the foot, right thigh and some damage on the fingers and toes. The group may have been chemically treated and some recutting may have taken place in the hermaphrodite's breast.

A detailed photograph of a classical statue's lower torso and draped clothing. The figure is wearing a flowing, multi-layered garment that is heavily draped and tied at the waist. The fabric is rendered with fine, visible folds and creases, showing a high level of detail. The statue is set against a dark, solid background. A faint, diagonal watermark across the image reads "Copyright 2014 by Payton Parker, sculptor ©".

Denkmal des Admiral Wilhelm von Tegetthoff - 1827-1871 Graz Tegetthoffplatz 1877 von Carl Kundmann 1838-1919 - sculptor

Niederwalddenkmal, Rüdesheim am Rhein - Johannes Schilling, sculptor, architect was Karl Weißbach, the monument was inaugurated on 28 September 1883. The 38 metres (125 ft) tall monument represents the union of all Germans. The monument was constructed to commemorate the founding of the German Empire in 1871 after the end of the Franco-Prussian War.

Praterstern in Vienna - Leopoldstadt, Tegetthoff Denkmal, Wein, Praterstern, Carl Kundmann, bildhauer - statue, and Carl von Hasenauer, architecture, unveiled on September 21, 1886. The portrait figure atop looks photo-derived but as a late period sculpture it's better than most. Carl Kundmann being one of the better sculptors trying to maintain Classical/Hellenistic content within his figure sculpture at this late period - though with mixed results.
